

7127 10SI STYLE

HIGH AMP ALTERNATORS FOR SPECIFIC FIT GM VEHICLES

- Clocked right, direct fit, NO hassle installation
- Custom voltage regulator allows usage with OEM wiring or can be used as a 1-wire alternator
- Larger copper windings produce more amps at idle and cruise than any alternator of its kind
- 100 or 140 amp output and available in a variety of finishes
- Ideal for high horsepower muscle cars, hot rods, show cars, custom trucks and daily drivers

What is clocking?

Clocking refers to the position of the back alternator case to the front case. The 7127 10SI alternators can be clocked at 3, 6, 9 or 12. That means that the positive terminal, the OEM electrical plug and the various mounting bracket bosses could be in one of 4 positions relative to the front case. Unlike some alternator manufacturers who offer just one alternator clocking, Tuff Stuff alternators exactly match the OEM case positioning which eliminates any mounting issues.
